County

West Central Ohio (WCO) Regional Seasonal Influenza Activity Report MMWR Week 2 1/6/2019 – 1/12/2019

Weekly Influenza Activity Summary:

Montgomery County (Week 2): The number of influenza-associated hospitalizations dropped from week 1 to week 2 and remains below the 5-year baseline average. Of the 92 influenza-associated hospitalizations this flu season, nearly half have occurred in individuals < 5 years of age or > 65 years of age. Influenza-related emergency department (ED) activity decreased during week 2; the percentage of ED visits for *constitutional syndrome* decreased by 3.5%, and the percentage of ED visits attributable to *fever & ILI symptoms* decreased by 8.8%. Both indicators were above the 5-year baseline average for week 2. Thermometer sales in Montgomery County decreased by 8.3% during week 2. Overall, influenza activity in Montgomery County decreased during week 2 but is likely to increase over the next several weeks.

West Central Ohio Region (Week 2): Regional influenza-associated hospitalizations decreased from week 1 to week 2. Nearly half of the regional influenza-associated hospitalizations in the 2018-2019 flu season have occurred in individuals < 5 years of age or > 65 years of age. Overall, regional influenza activity decreased during week 2 but is likely to increase over the next several weeks.

Ohio (Week 2): Current Activity Level - Widespread

Increased ILI in at least half of the regions AND recent (within the past 3 weeks) lab confirmed influenza in the state. The Ohio Department of Health (ODH) has reported the following positive results from flu specimens sent to the ODH laboratory (through 1/12/19): (162) Total positives; (119) Influenza A/pdmH1N1; (42) Influenza A/H3N2; (1) Influenza B.

National (Week 2): Nationally, influenza activity is elevated. From week 1 to week 2 there was a slight decrease in activity. Forty-six of 54 jurisdictions (all 50 states, the District of Columbia, Guam, Puerto Rico, and U.S. Virgin Islands) in the U.S. are reporting regional or widespread influenza activity. Influenza A(H1N1), influenza A(H3N2), and influenza B viruses continue to co-circulate. Influenza A(H1N1)pdm09 viruses have been most prevalent this flu season. However, influenza A(H3) viruses have predominated in the southeastern United States (HHS Region 4) [Ohio is in HHS Region 5].

For hospitals and other regional healthcare facilities to more accurately monitor influenza in the area, this report will include regional and Montgomery County specific influenza activity. The regional influenza report will include positive influenza cases from healthcare facilities in Auglaize, Butler, Champaign, Clark, Darke, Greene, Miami, Montgomery, Preble, Shelby, and Warren counties (<http://www.gdaha.org/regional-hospital-locator>).

Confirmed Influenza-associated Hospitalizations

MMWR Week	40-51*	52*	1*	2*	2018-2019 Flu Season Total as of 1/18/19
Week Ending	12/22/18	12/29/18	1/5/19	1/12/19	
Auglaize	2	1	1	0	4
Butler	13	6	8	9	36

Montgomery County Seasonal Influenza Activity Report MMWR Week 2 1/6/2019 – 1/12/2019

Montgomery County Weekly Surveillance Data

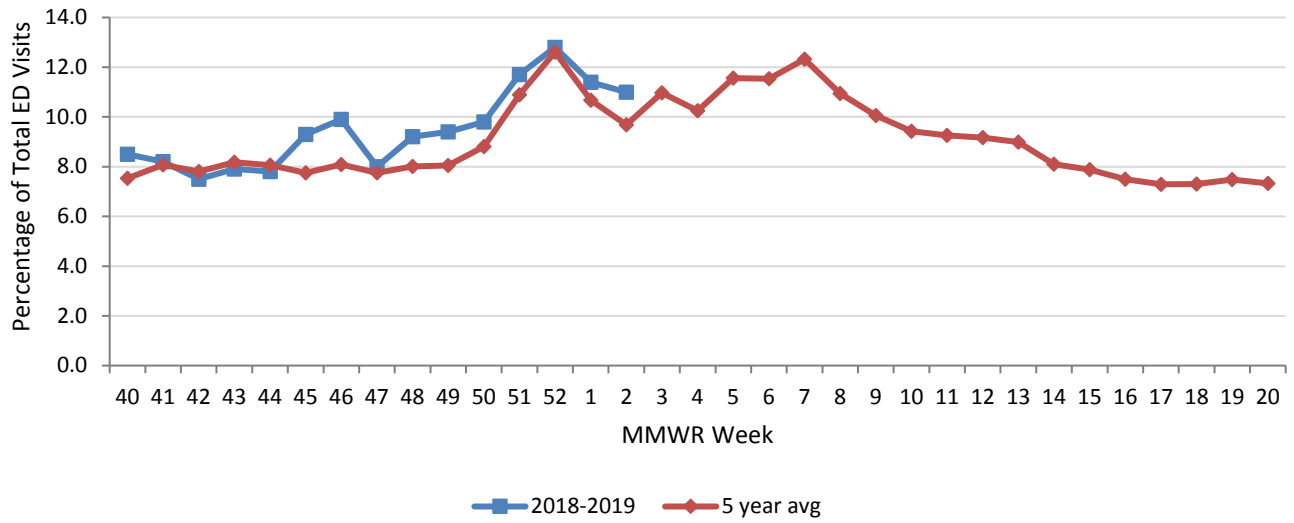

Surveillance Data	Current Week	% Change	Trend
Influenza Hospitalizations	11	35.3%	
% Constitutional ED visits	11.0%	3.5%	
% Fever & ILI ED visits	3.1%	8.8%	
Thermometer sales	88	8.3%	

* Percent change not calculated for small numbers
Dash (-) indicates no change

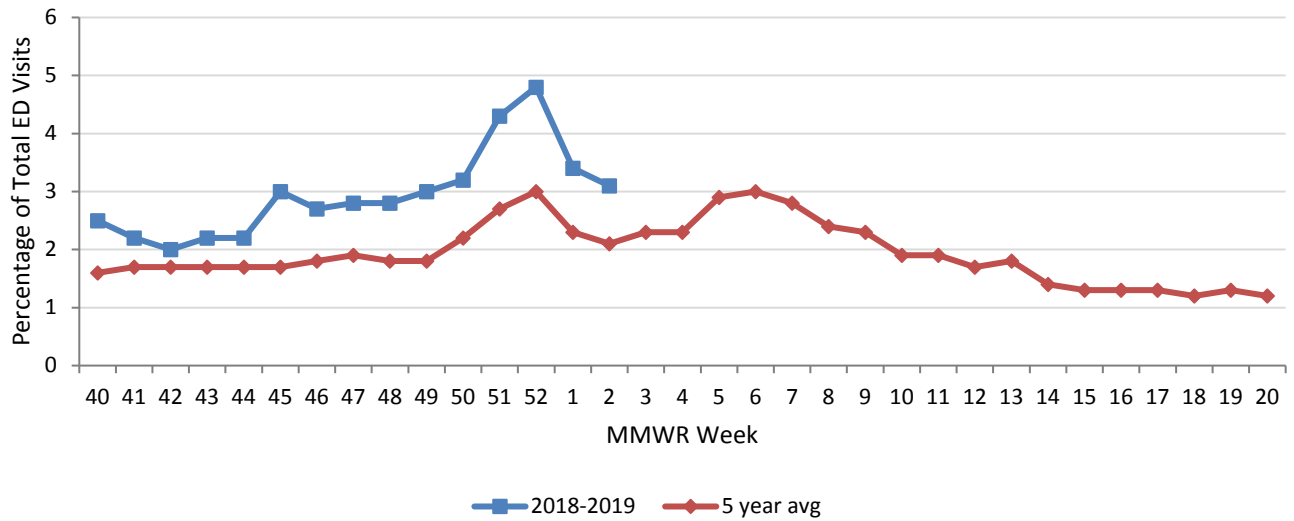

Montgomery County Confirmed Influenza-associated Hospitalizations by MMWR Week with 5-Year Baseline Average; 2018-2019

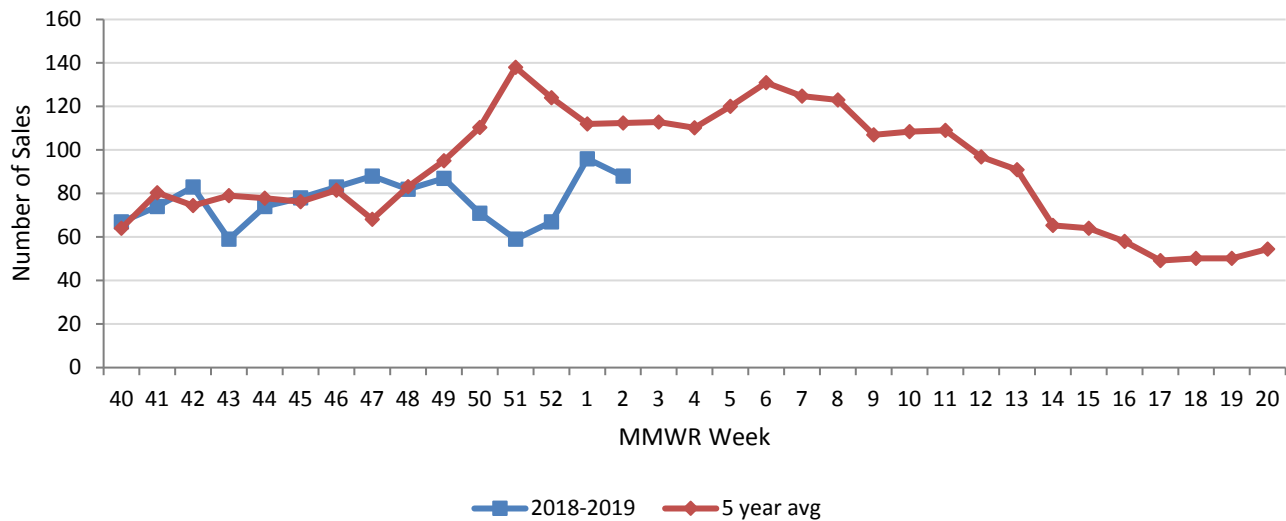

Montgomery County Constitutional ED Visits by MMWR Week with 5-Year Baseline Average; 2018-2019

Montgomery County Fever & ILI Specified ED Visits by MMWR Week with 5-Year Baseline Average; 2018-2019

Montgomery County Thermometer Sales by MMWR Week with 5-Year Baseline Average; 2018-2019

Sources of Influenza Surveillance Data

Six types of data sources are examined on a weekly basis to help determine the influenza activity level for Montgomery County:

National Retail Data Monitor (NRDM)-OTC Drug Purchases: The NRDM collects over-the-counter (OTC) drug sales information from approximately 80 Montgomery County chain drug stores and grocery stores. For influenza surveillance, thermometer sales are monitored on a weekly basis.

Emergency Department Visits (EpiCenter): EpiCenter collects emergency department chief complaint data from hospitals and urgent care facilities across Ohio counties in real time and classifies them into symptom and syndrome categories. Chief complaints from the constitutional syndrome category and the ILI + Fever symptoms classifier are analyzed for influenza surveillance.

Sentinel Providers (ILINet): Sentinel providers, through the US Influenza-like Illness Surveillance Network (ILINet), collect outpatient ILI data. ILI is defined as a fever (> 100 °F), **and** cough and/or sore throat without another known cause. Providers report the total number of patients seen and the number of patients with ILI by age group on a weekly basis. Sentinel providers also submit specimens for influenza testing to the ODH laboratory throughout the influenza season.

Laboratory Surveillance: Positive laboratory reports are forwarded to local health departments. Generally, specimens are submitted by health care providers or hospitals.

Influenza-associated Hospitalizations (ODRS): Influenza-associated hospitalizations are reported to local health departments for entry into the Ohio Disease Reporting System (ODRS). Hospitalizations can be used as an indicator of the severity of illness during a particular influenza season. This condition became reportable in 2009.

Influenza-associated Pediatric Mortality (ODRS): Influenza-associated pediatric mortalities are reported to local health departments for entry into ODRS. Pediatric deaths can be an indicator of the severity of illness during the influenza season. This condition became reportable in 2005.
